BACKGROUND
Major histocompatibility complex (MHC) molecules, which include human leukocyte antigens (HLAs), are cell-surface receptors that bind foreign peptides and present them to cytotoxic T lymphocytes (CTLs). MHC class I molecules consist of two polypeptide chains, an α or heavy chain, and a non-covalently associated protein, β2-microglobulin. Antigens that bind to MHC class I molecules are typically 8-10 residues in length, and are stabilized in a peptide binding groove. Qa-1, a murine MHC class I b molecule, presents the Qa-1 determinant modifier (Qdm) peptide to the CD94/NKG2A receptor on natural killer (NK) cells. This interaction participates in protecting self cells by inhibiting NK cytoxicity, and may be mediated by CD8, since the Qa-1 protein preferentially binds to CD8+, but not CD4+, T cells. The gene encoding murine Qa-1 maps to chromosome 17.

REFERENCES

CHROMOSOMAL LOCATION
Genetic locus: H2-T23 (mouse) mapping to 17 B1.

SOURCE
Qa-1 (L-12) is an affinity purified goat polyclonal antibody raised against a peptide mapping at the N-terminus of Qa-1 of mouse origin.

STORAGE
Store at 4° C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

PRODUCT
Each vial contains 200 µg IgG in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.
Blocking peptide available for competition studies, sc-26168 P, (100 µg peptide in 0.5 ml PBS containing < 0.1% sodium azide and 0.2% BSA).

APPLICATIONS
Qa-1 (L-12) is recommended for detection of Qa-1 of mouse and rat origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).
Suitable for use as control antibody for Qa-1 siRNA (m): sc-42923.
Molecular Weight of Qa-1: 44 kDa.
Positive Controls: mouse thymus extract: sc-2406.

RECOMMENDED SECONDARY REAGENTS
To ensure optimal results, the following support (secondary) reagents are recommended: 1) Western Blotting: use donkey anti-goat IgG-HRP: sc-2020 (dilution range: 1:2000-1:100,000) or Cruz Marker™ compatible donkey anti-goat IgG-HRP: sc-2033 (dilution range: 1:2000-1:5000), Cruz Marker™ Molecular Weight Standards: sc-2035, TBS Blotto A Blocking Reagent: sc-2333 and Western Blotting Luminol Reagent: sc-2048. 2) Immunofluorescence: use donkey anti-goat IgG-FITC: sc-2024 (dilution range: 1:100-1:400) or donkey anti-goat IgG-TR: sc-2783 (dilution range: 1:100-1:400) with UltraCruz™ Mounting Medium: sc-24941.

RESEARCH USE
For research use only, not for use in diagnostic procedures.

PROTOCOLS
See our web site at www.scbt.com or our catalog for detailed protocols and support products.
